

free_bookz_player (v2)

Overview

The `free_bookz_player` is a system that displays `bookz` interspersed with `adz` on the user device.

Requirements

The requirements for version 2 of the `free_bookz_player` follow.

1. Lines of the `bookz` must be displayed for “exactly” one second before the text of an advertisement is displayed.

Rationale/Explanation: In v1, users observed that the text of an advertisement was sometimes displayed immediately after the line of a `bookz` was displayed. They found this behavior troubling and it made the `bookz` difficult to read.

2. No more than one advertisement may be displayed after all of the lines of the `bookz` have been displayed.

Rationale/Explanation: In v1, advertisements continue to be displayed after the `bookz` has been completed. Users found this so annoying that they stopped using the product.
