

# Sprintable Stories

ID Story

S1 As a salesperson I want the system to work for competitions in which the divers score is the weighted total of an arbitrary number of dives so that it can be used by more customers.

S2 As a salesperson, I want the scores to be calculated as they were in the previous version so that it can continue to be used by existing customers.

S3 As a salesperson I want the information for an individual diver to be contained in a file that is read by the system so that it can be used for different events.

S4 As a user I want to be able to put information about a particular diver in a file so that I can keep records of an event.

S5 As a user I want to be able to enter the file name to use at the command line so that the system can be used with more than one diver.

## Acceptance Criteria

- The system displayed the correct output for a diver who completes three dives with 5 judges not dropping the high or low
- The system displayed the correct output for a diver who completes four dives with 6 judges dropping the high and low
- The system displays the correct output for all system tests from the previous version
- The company has a document describing the file format
- The company has an example file
- The company has a document describing the file format
- The company has an example file
- The system displayed the correct output for a system test that uses the example file
